## **Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application.

## **Listing of Claims:**

1. (ORIGINAL) An absorbent resin particle comprising:

a crosslinked polymer (A) including, as essential constituent units, a water-soluble vinyl monomer (a1), and/or a vinyl monomer (a2) that is formed into the water-soluble vinyl monomer (a1) by hydrolysis, and an internal crosslinking agent (b); and

a hydrophobic substance (C),

wherein

the absorbent resin particle has a structure such that a part or an entirety of the hydrophobic substance (C) is contained in the inside of each particle of the absorbent resin particle.

- 2. (ORIGINAL) The absorbent resin particle according to claim 1, wherein the structure such that a part or an entirety of the hydrophobic substance (C) is contained in the inside of each particle of the absorbent resin particle is a structure such that each particle of the absorbent resin particle contains a connection (RC) formed with the hydrophobic substance (C).
- 3. (ORIGINAL) The absorbent resin particle according to claim 1, wherein the structure such that a part or an entirety of the hydrophobic substance (C) is contained in the inside of each particle of the absorbent resin particle is a structure such that a material (D) obtained by coating or impregnating a part or an entirety of either a hydrophilic material (d1) or a hydrophobic material (d2) with the hydrophobic substance (C) is contained in the inside of each particle of the absorbent resin particle.
- 4. (ORIGINAL) The absorbent resin particle according to claim 1, wherein the hydrophobic substance (C) has a HLB value in a range of 1 to 10.

- 5. (ORIGINAL) The absorbent resin particle according to claim 1, wherein the hydrophobic substance (C) is a silicone or a modified silicone.
- 6. (ORIGINAL) The absorbent resin particle according to claim 1, further comprising a diffusing-penetrating agent (E) as a constituent component.
- (ORIGINAL) The absorbent resin particle according to claim 1, wherein
  the absorbent resin particle exhibits a diffusion absorption amount in a range of
  40 ml to 70 ml.
- 8. (ORIGINAL) The absorbent resin particle according to claim 1, wherein the absorbent resin particle exhibits an absorption time (Z) in a range of 0.5 minute to 3.5 minutes, the absorption time being a time necessary for the absorbent resin particle to swell to 70 percent by volume with respect to a saturated swelling degree by absorbing physiological saline.
- 9. (CURRENTLY AMENDED) The absorbent resin particle according to claim 1, wherein

the absorbent resin particle satisfies formulae (2) and (3):

$$30 \le (X) \le 70$$
 (2)  
(Z)  $\le -0.0071(Y) + 2.7$  (3)

where

5

- (X) represents a water-retention amount (g/g) of the absorbent resin particle that had been immersed in physiological saline for one hour,
- (Y) represents a liquid permeation rate (ml/min) under loading of [[21.4]] 2.14k Pa at which physiological saline permeates the absorbent resin particle that has been immersed in physiological saline for one hour, and

- (Z) represents an absorption time (min) necessary for a sample to swell to 70 percent by volume with respect to a saturated swelling degree by absorbing physiological saline.
- 10. (ORIGINAL) The absorbent resin particle according to claim 9, wherein the absorbent resin particle further satisfies formula (4):
   10 ≤ (Y) ≤ 100 (4)
- (ORIGINAL) An absorber comprising:
   the absorbent resin particle according to claim 1; and
   a fibrous material.
- 12. (ORIGINAL) An absorbent article comprising an absorber according to claim 11.
- 13. (NEW) An absorbent resin particle having a diffusion absorption amount in a range of 40 ml to 70 ml.
